Globalisation and the Development Pattern with Chinese Characteristics

Theses

Globalisation and the Development Patterns with Chinese Characteristics

1. *The 21st century witnesses a rapid economic development in China which coincides with a new cycle of globalisation tide and the global economy's strong growing momentum. In this sense, China takes the biggest advantage of the globalisation bonus in the world today.*

2. *The success of China's economic transformation is credited to the gradual formulation of development patterns with Chinese characteristics within the context of diverse economic developments throughout the world.*

3. *China is faced with enormous economic transformation pressure as a result, on the one hand, of the unfavourable development of the global economy and, on the other hand, of the accumulative contradictions of the Chinese economy. The achievement of the future development goals depends on a successful economic transformation in China.*

4. *The uprising of the Chinese economy contributes to the balanced development of the global economy. China is bound to shoulder more and greater responsibilities in the global development as well as to meet common challenges which people in the world are confronted with.*

CV

Born in 1959. WANG Yiming earned his Bachelor and Master of Science from Southwest University in Chongqing, followed by a Ph.D. in Economics from Nankai University in Tianjin. From 1993 to 1994, he was a visiting scholar of the Applied Economic Department at Katholieke Universiteit Leuven in Belgium.

WANG Yiming began his academic career in 1989 as an Associate Research Fellow at the Regional Economic Research Institute of the Academy of Macroeconomic Research (AMR) of the China National Development & Reform Commission (NDRC). During the following nine years, he held the post of Division Chief and then Deputy Director. In 1998, WANG Yiming became a Research Fellow and Assistant Vice President, a position he held until 2001, when he in addition to being a Research Fellow was promoted to his current position as Vice President of AMR, NDRC.

In his publications he addresses topics as Research on the Strategic Problems in Economic and Social Development during the 11th Five-year Plan in China, Research on the Key Problems in Establishing and Perfecting a Socialist Market Economic System, The Strategic Problems in Economic and Social Development in Economic and Social Development during the 10th Five-year Plan in China and The Strategy of Chinese Economic and Societal Development in the Early 21st Century. His research focuses on development strategy and planning, macroeconomic policy, and regional economic policy.
